DAY SCHOOL FOR YOUNG LADIES, WHITEVILLE, N. C. J. G. BEATTY, Principal and Teacher of English. THE SESSION commences on the 1st of August, and closes the last of December. Instruction in English, two dollars per month,

Music on Piano, twenty dollars. Use of instrument for practice, five dollars. June 24th, 1859.-43-5t. WAYNE FEMALE COLLEGE. THE FALL SESSION will begin on Thursday, the 28th of July, 1859. Perfect propriety in the deportment of our upils, prudent economy in their expenditures, unweared igence in their studies, and an elevated standard of schol-

arship, are cardinal principles in our system of government. To the people in the middle and eastern sections of Caroling, we appeal with confidence for support. Ours is a pleasant, retired, and healthy situation-sufficiently remote from the various rail roads which intersect each other here, to be free from annoyance. Our location is also abundantly far enough above the level of the sea to insure good health. Of this our history for the three years past affords the most satisfactory evidence; and at the same time, our pupils may return home at the close of the Spring term, without risk from too sudden transition of climate. Why send your daughters and wards to the vicinity of the mountains to spend the Winter and Spring-the most healthy seasons of the year-and then carry them down among the swamps of the eastern counties, to pass their long! Summer vacation and in many instances to sicken and die before the time arrives for them to return to School? Remember, too, that the additional expense for rail road

It is a send a whole great reputation the ship has already achieved with the great reputation army of workmen are busily engaged getting forward her public, not to let this matter be overlooked. A mere internal fittings. Such an amount of progress, when experimental cruise and a trial of her different rates of judged by other ships, may appear to be no great mat- speed will not give the public such explicit confidence ter, but when we reflect a moment on the details, and in the unrivalled capacity of the ship as if she ran be-THE NINETEENTH annual session of this Institution will find that the deck alone requires 18 miles of five inch tween two given points—say from Portland to Gibralplanking to cover it, that the paddle boxes are of rolled tar and back. On such a trip there could be no mistake iron, that each contains 24,000 cubic feet and is equal whatever as to her rate of speed, which we firmly beof young and beautiful shade trees, together with a well of most excellent water. It is a level and healthy country, and mental education. The buildings are so arranged as to combine to a vessel of 600 tons, we begin to see that in

> has been in the habit of employing for his other ships. - | which even his great skill and enterprise can achieve. Thus, Messrs. Ferguson, the celebrated mast-makers, supply the masts and all the spars; Messrs. Westhorpe take the rigging, Messrs. Hall the sail, and Messrs. Crace the decorations; Brown, Lennox & Co. make the chain cables, Messrs. Wood supply Trotman's anchquired salary) received until the 5th August. Address the ors, and Messrs. Wolfe & Forrest the boats. Watt & Co. finish the screw engines, and Mr. Russell the paddle engines, and all the remaining iron and wood work .---Some of these subdivisions include work enough to be really considered as extensive contracts. Thus the rigging will require 900 blocks, and no less than 70 tons standing rigging. Her sails will consume nearly 12,000 square yards of canvass; she is to have 20 boats fitted with masts and sails complete, exclusive of the two TE WISH TO ENGAGE active and energetic Agents small screw steamers, each of which is to be 100 feet long by 16 wide, of 130 tons measurement, and 40 horse power. She is to carry upwards of a thousand fathoms of chain cables, all of the most massive description .-Her anchors are 16 in number, ranging from one ton to seven tons (the largest.) Had she been fitted with the Admiralty anchor, and had the old rule been followed of requiring a certain weight of anchor to the vessel's tonnage, her largest anchors must have been 25 tons each. Cumberland, Robeson, Bladen, Columbus, Brunswick, By using Trotman's anchors, however, the same holding power is obtained with an anchor of seven tons. There chain cables have frequently parted under the tremendous strain, but the anchors have never drawn a single

On coming into possession of the vessel the new company thought that in case of war the Great Eastern GENTLEMEN YOUR OLD CUSTOMER IS YET in might prove an invaluable auxillary to the Government, running down the largest of the enemy's ships, which for sale would do well to give me a call, or address me at Clinton, N. C. J. A. McARTHIR. running down the largest of the enemy's ships, which they stipulate the immense speed of the vessel would enable her to overtake with perfect ease. For this purpose, therefore, it to pay five pounds each for the first, second and third was decided to strengthen still more her sharp powerful editions of "Paradise Lost.

TERMS OF ADVERTISING. Per Square of 10 lines or less-cash in advance charged 37} cents per square for each insertion after the first. AT No advertisement, reflecting upon private character, can, under any circumstances, be admitted. men. With this large increase of strength forward the Great Eastern, steaming full power, could cut in two

the largest wooden line-of-battle ship that ever floated. woodwork is getting on with almost equal rapidity .-All these fittings are made on shore by means of powerful machinery, and come on board ready to be at once fixed to their places. When we say that the deliveries of these prepared materials prior to the 1st of June included 42,000 feet of beadings, 44,000 feet of mouldings, 40,000 feet of prepared planking, 15,000 feet of matched battens-which, if laid on end, would extend nearly 30 miles-our readers will have a fair idea of the work now going on. Everything connected with the vessel is on a gigantic scale. Thus it requires more than six tons of paint to give one coat to the interior side from the water-line to the bulwarks. When completely rigged she will have six masts-one forestaysail mast of wood, three mainmasts (square-rigged) of iron, one mizzenmast of wood, and one jiggermast, (the last,) also of wood. The three wooden masts are already placed and almost entirely rigged; the iron ones will be so shortly. The last mast is a single tree (Canada pine) about 130 feet high, and proportionately thick. A finer mast never left Mr. Ferguson's yard, though he enjoys the reputation of making the best and strongest masts in the world. The foremast is a built mast, as is also the mizzen, but all the topmasts, yards and gaffs are single sticks, of immense length and width, straight as arrows, and free from knots or sap. The cabins, as far as they have been yet fitted, are amply spacious when compared with the accommodation offered by other vessels. The berths are very ingeniously made to fold flat against the wall during the day and so give much increase of room for any who may choose to use their cabins as sitting rooms. Both paddle and screw engines are almost completely finished, and the former have already been turned by hand, and will be turned by steam by way of trial in the course of a fortnight or so. It is quite impossible by mere description to give any adequate nopair of cylinders, with its crank, condenser and airpump, forms in itself a complete and separate engine, capable of easy disconnexion from the other three, so that the whole is a combination of four engines. A friction clutch connecting the two cranks is the means by inties, so I can get him. I will furthermore power of 3,000 horses or 33,000 lb., when working 11 the expansion valve cutting off at one-third of the stroke. All the parts, however, are so constructed that they will work smoothly either at eight strokes per minute, at 25 lb., without expansion (beyond what is unavoidably effected in the slides,) or at 16 strokes a minute with the expansion valve cutting off at one quarter of the stroke. Under the latter circumstances the paddle engines alone would give an indicated power of 5,000 horses. The boilers are immensely strong, and have been tested to double the pressure they are required to bear. Their weight, including donkey engine, pumps, funnels, &c., is 210 tons, and they are capable of containing 156 tons of water. Each set has about 8,000 square feet of tube surface, exclusive of flue or furnace, and about 400 square feet of fire-bar surface. Each is equal to supply ult., his negro man WILLIAM, aged about fifty years, freely with moderate firing steam for an indicator of 1. copper-color; has a scar on his forehead, is about five 800 horse power when working with 15 lb; but with feet ten or eleven inches high, and weighs about one hun-full firing can supply freely for an indicator of 2,500 The screw engines are constructed on the same improved principles. They have four cylinders of 84 inches diameter and 4 feet stroke. The cylinders are

working 45 strokes a minute, with steam on at 15 lb. and cutting off at one-third of the stroke, these engines give an indicated power of 4,400 horses, but at 55 strokes a minute, steam on at 25 lb., and cutting off at one-quarter of the stroke, the power will reach to 6,500 Several weeks have elapsed since we recorded the ar- horses. Thus the united efforts of both screw and padbine the comforts of a HOME with the advantages of a point of labor some really astounding progress has al- that have yet been formed. The objections which have been urged against this noble vessel are precisely of the When tenders for finishing the vessel were first called same sort as those which have been advanced against making it a convenient matter to ship, at almost any time Board, including washing, lights, and fuel per session of five for, in March last, the directors were dissatisfied with improvements of every kind-against railways, steam all, and therefore concluded an agreement with Mr. Scott | machinery, iron ships, and large ships. What would Russell on the 4th of April, leaving it to that gentleman not have been said 20 years ago against building such to finish the ship upon his own plans, and to fit her in vessels as the Himalaya or the Persia-what, in fact, every respect for sea as a first-class vessel. The contract | was not predicted against them when they were built? was for 125,000%, to be completed on the 4th of Sep- The Great Eastern is to be the Himalaya of her class, tember, with a premium of 1,000% a week for early com- and the results which will be attained by her speed we pletion, and a penalty of 10,000l. a week for each com- believe will revolutionize our whole mercantile marine. plete seven days beyond the allotted time. capable of being worked together or separately. When

Col. Henry Fuller writes; I saw yesterday among the marvellous collections of the British Museum, ful files of the leading New York Journals, elegantly bound affording a wonderful contrast to the little four by six inch volumes of the first newspaper ever printed. Surely an editor should be careful of what he writes; for here, preserved in "everlasting remembrance" his "leaders" (too often misleaders,) will glare a blushing posterity in the face through all coming time. I little dreamed when penning hasty paragraphs for the "Evening Mirror" in Ann street, at the last minute before "going to press," that I should see every word so scrupulously preserved in the archieves of the British Museum. Such immortality of language should make us word-weavers pause and consider. It is like a phantom Memory in the future world rising to curse or to bless in the great Museum of Souls.

The British Museum with its five hundred and sixty thousand volumes, is a stunning institution. The great dome, one hundred and forty feet in diameter, filled to the very apex with richly bound books, soars over us like an intellectual heaven. The "King's Library," three hundred feet in length, is a perfect wilderness of magnificent works; but the "Autograph" and "Manuscript" room is most wonderful of all. Every King, Queen, Poet, Statesman, and Artist, known in history is represented here in the original hand writing. Best of all, and carefully kept in a curtained glass case, is the signature of William Shakspeare! (Henceforth I shall always spell it as he wrote it.) The autograph is appended to the deed of a house and lot, bought one day and mortgaged the next, a financiering operation indicating that even the King of Poets was occasionally " hard market for likely Negroes, for which I am determined it not for carrying guns, yet still more effectively in up." The Museum paid three hundred guineas for the

> bows by laying down three complete iron decks forward TRIAL OF RIFLED CANNON.—In accordance with an extending from the bows backwards for 120 feet. These order just issued by the Secretary of War, a board of
